

Wednesday Challenge Form

Group Members: Lucas, Elizabeth, Evan, Me

Problem Statement: Design and pitch an idea for a handout for this year's robotic competition. Items must be: cool, cost about \$0.50 to make, home made, have 589 somewhere, and be able to be mass produced. It would be nice if it represents the game somehow.

Approach:

Solution: Conner's group won again. Their idea was a aerial screw toy. Another group who pitched a hand spinner, also technically won.

Lessons Learned: When presenting ideas, you need to be well prepared.
